

Sprint 3 Retrospective

<p>What went well?</p> <ul style="list-style-type: none">- Image related functionalities about both cards and profiles were achieved, which puzzled us in the last sprint.- Frontend & Backend communication was high enough to have smooth work throughout the sprint.- Crucial CRUD operations were added for users, which is one of the key components of the end goal.- Security aspects were added to have a secure app.	<p>What could've gone better?</p> <ul style="list-style-type: none">- The updates to the design took more time than expected, it would have been more efficient if we would have chosen more carefully the first design, so that it wouldn't require any changes.- Some functionalities of the frontend have not been implemented correctly, more attention is required in some cases.- We had difficulties to implement an important functionality (click on card redirects the user to the details page corresponding with that card) on time for this Sprint Review, we could have worked on this earlier.
<p>What do we want to try next?</p> <ul style="list-style-type: none">- More sponsor-related functionalities should be added to include Sponsor entities in the picture.- CRUD operations on posts will be implemented.- Interaction related frontend components should be added functionality.- Search & filtering & sorting should be implemented	<p>What puzzles us?</p> <ul style="list-style-type: none">- How to increase our current effectiveness to keep up with the user stories for each sprint?- How to implement search & filtering & sorting functionalities on the cards?
